S051-0050  
Diode Tester  
\$450.00

The S051-0050 Diode Tester is a high production tester that reads both reverse leakage and voltage junction drop at the same time without reversing the leads or throwing a switch as other testers do. With the addition of the voltage junction drop you can observe potential failure thus cutting down premature field returns.

110 Volts AC, 60 CPS, 4 Amps
